

# INTEGRATING SENDGRID WITH PYTHON

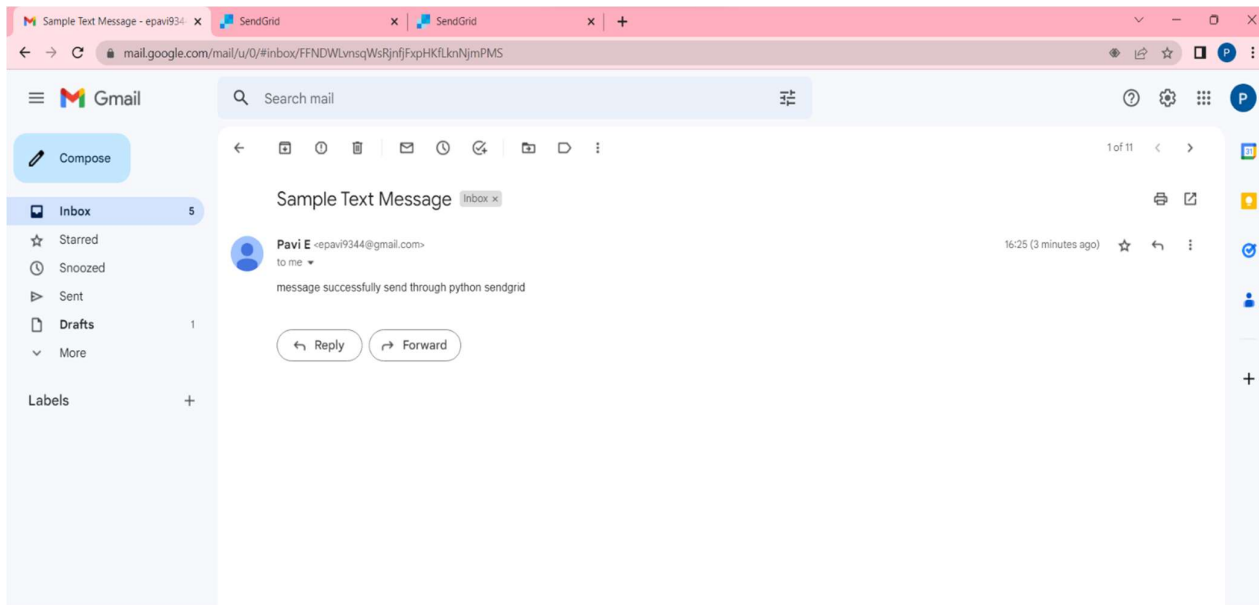

Team ID	PNT2022TMID46351
Project Name	Nutrition Assistant Application

Install package : > pip install SendGridSend

mail :

A screenshot of a code editor showing a Python script named 'sendmail.py'. The script imports 'configparser', 'ssl', 'sendgrid.helpers.mail', and 'Mail'. It reads a 'config.ini' file and defines a function 'sendmailusingSendgrid' that takes API key, from\_email, to\_emails, subject, and html\_content as arguments. The function creates a 'SendGridAPIClient', sends an email, and prints the response status code and body. The bottom of the image shows a terminal window with an HTTP response from SendGrid, including headers like 'Date: Fri, 18 Nov 2022 04:26:58 GMT', 'Content-length: 0', and 'Access-Control-Allow-Origin: https://sendgrid.api-docs.io'.

SendGrid mail activity:
